

INSTRUCTIONS

Instructions for testing Doors and Gates with closers

Step 1 Put the Door Speed Gauge on the floor on the hinge side of the door.

Step 2 Open the door to 90° and hold it at the 90° mark.

Step 3 Release the door and time the closing sweep between the two black lines and area shaded blue. The time the door takes to close from 90° open to 12° closed should be a minimum of 5 seconds. If the door takes less time to close than the required 5 seconds, re-adjust and do another door speed test until your door takes at least 5 seconds to close.
